Part 3 - Scope of application: Calibration

List all the measurement parameters for which you seek accreditation.
Use a photocopy of this page for each field of measurement.

Field of measurement:			
Measured quantity	Range	*Expanded Uncertainty ($\pm$)	Technique, Reference Standard, Equipment
N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A

*** Expanded Uncertainty:**

- Expanded Uncertainty is the measurement uncertainty at a coverage probability of 95 %, which usually requires the use of a coverage factor of $k = 2$. This measurement uncertainty is a value for which the laboratory has been accredited using the procedure that was the subject of assessment. In certificates issued under its accreditation scope an accredited laboratory is not permitted to quote an uncertainty that is smaller than the published uncertainty for respective ranges as given above.

Part 4 - Scope of application: Testing

4A. As far as is possible, quote standard specifications in the third column. These may include specifications issued by companies and other organisations, both Pakistan and foreign, as well as national and international standards. Give reference numbers and dates of specifications quoted.

In the absence of standard specifications, documented in-house procedures may be quoted: cross-refer to your laboratory Management System/Procedures Manual.
